

KEEGAN BOND

Software Engineer

Niagara Falls, ON | +1 (905) 359-7028 | keeganbond123@gmail.com | [LinkedIn](#) | [GitHub](#)

EXPERIENCE

Founding Engineer

N86 • Mar 2026 – Present • Remote

- First engineering hire — building the N86 platform from 0→1 alongside the founding team, owning frontend architecture and core product surfaces.
- Own UI/UX end-to-end: produce wireframes and high-fidelity mockups in Figma, then ship them as production React components — closing the design-to-code loop without a dedicated designer.
- Operate across the full stack and product lifecycle — scoping features, making technical trade-offs, and shipping, deploying, and iterating directly with founders.

Software Engineer Intern

Acadium • Jun 2025 – Oct 2025 • Remote

- Designed and shipped Acadium Sales, a responsive internal dashboard for managing and filtering thousands of user records.
- Built robust search and filtering tools that helped the sales team match businesses with qualified students 20% faster.
- Engineered server-side pagination, indexed filtering, and batched API calls with debounced queries, improving response speed by 40%+.
- Partnered with the tech lead to translate ambiguous requirements into clear deliverables, shipping a production-ready tool.
- Researched AI-driven GTM platforms (e.g., Landbase) and produced a strategy doc mapping capabilities and integration paths for Acadium's AI initiatives.

Founding Software Engineer

mfg.parts • Feb 2023 – May 2024 • Remote

- First engineering hire and frontend team lead — owned architecture and development of core product features.
- Built a 3D collaborative CAD viewer with React and Autodesk Platform Services, enabling real-time visualization, annotation, and commenting on 3D models.
- Developed real-time collaboration features (live sessions, synced views, Figma-style following) with PubSub to streamline manufacturer-engineer workflows.
- Conducted user research with 110+ users across 40+ companies to shape and ship the MVP.
- Implemented a QA pipeline with Storybook and Chromatic, increasing the rate of deployed components by 15%.

PROJECTS

[Spotify Playlist Builder](#) ↗

Personal Project • Jan 2026

- Built a Spotify-integrated playlist builder with Next.js, React, and TypeScript — supporting bulk selection and powerful filtering.
- Implemented Spotify OAuth and API integrations for playlist creation, track addition, and genre-based filtering.
- Designed a clean, responsive UI with Tailwind CSS, shadcn, and Material UI.

SKILLS

Languages

JavaScript / TypeScript, Python, C

Frontend

React, Redux, Next.js, Tailwind, shadcn, Material UI, Storybook / Chromatic

Backend

Node.js, Express, REST APIs, PubSub, SQL / NoSQL

Cloud & DevOps

Docker, CI / CD, Firebase, Azure, GCP

EDUCATION

Diploma, Software Engineering

BrainStation

Sep 2022 – Dec 2022 • Remote

Diploma, Computer Engineering (Honors)

Niagara College

Sep 2020 – Apr 2022 • Welland, ON

CERTIFICATIONS

Master the Coding Interview: Data Structures + Algorithms

JavaScript Algorithms and Data Structures Masterclass
